NavDx®

Optimizing HPV+ Cancer Care

Phlebotomy Services

Blood Draws at *your* Convenience

Your Provider has ordered a NavDx® test as part of your follow-up care for HPV+ head & neck or anal cancer

The NavDx test requires only a simple blood draw, and our patient-centered **NavDx Phlebotomy Services** can help make testing as convenient as possible. With flexible blood collection options, NavDx testing is widely available aross the United States.

A Simple Way to Get Your Blood Drawn

Our Patient Navigation team may contact you by phone, text, or email to help coordinate your blood draw. We'll review the collection options available in your area and help you schedule the one that works best for you.

Depending on availability in your area, options may include:

- **In-Home Blood Draw**
  Schedule a 15-20 minute appointment with a certified phlebotomist who collects your blood sample at your home.
- **Walk-In Blood Draw**
  Visit an available walk-in clinic or lab in your area to have your blood drawn.

Preparing for Your Blood Draw

Before Your Blood Draw

While scheduling your appointment, we will also arrange to ship a NavDx® Test Kit to you, unless your Provider has already given you one.

Once you have your kit:

- Store it safely at **room temperature**
- **Do not open** the kit
- Have the **unopened kit with you for your appointment**

There is no special preparation required for your blood draw; you may **eat, drink, and take medications normally** prior to your appointment.

After Your Blood Draw

Your phlebotomist will package your blood sample and ship it directly to our laboratory for processing.

NavDx results are sent to your Provider within 7 business days from the date your sample arrives at our lab. Your Provider will review the results and discuss them with you.

About NavDx®

What is the NavDx Test?

The NavDx test is the first and most clinically validated blood test that can detect HPV+ head & neck and anal cancer, often months before it shows up in clinical exams or on imaging. With a simple, non-invasive blood draw, NavDx testing can help your Provider uncover important information about your cancer status throughout your care journey, from before treatment begins through long-term monitoring after treatment ends.

Insurance Coverage

NavDx testing is covered by a growing number of commercial insurance companies. Coverage depends on the health insurance company and plan type. NavDx testing is covered by Medicare for surveillance of recurrence in patients with a documented history of HPV+ oropharyngeal or anal squamous cell carcinoma. For more information, visit **naveris.com/insurance-billing**.

Want to Get Started, Have Questions, or Need Help?

Our Patient Navigation team is happy to arrange your blood draw (with an order from your Provider), answer questions, or help guide you through your testing journey.
