NavDx®

Optimizing HPV+ Cancer Care

Order Guide

How to Order

Online Provider Portal

The NavDx® online Provider Portal gives you secure and HIPAA-compliant access to the full test ordering workflow, including:

- **Streamlined Ordering Process**
  Complete, sign, and submit test orders digitally. Order forms for existing patients are auto-populated with their information to save you time.
- **Convenient Test Kit Ordering**
  Order test kits directly from the portal for delivery to your practice.
- **Automated Test Scheduling**
  Schedule a full year of tests with a single order, at your specified cadence—no manual follow-up needed—with the Surveillance Testing Program (STP). The STP Dashboard provides a quick summary of each patient's status in the program. Scan the QR code below to learn more or visit: naveris.com/provider/implementing-navdx/#stp.
- **Real-time Access & Information**
  Review order status, receive and download test results, and view each patient's longitudinal testing history within your health system.

Surveillance Testing Program

Test Requisition Form

You can also place an order using a paper **Test Requisition Form (TRF)**. To download the TRF, visit naveris.com/provider/order-navdx/#trf or use the QR code on the back page.

TEST RESULTS ARE PROVIDED WITHIN **7** BUSINESS DAYS FROM THE DAY THE SPECIMEN IS RECEIVED IN OUR LABORATORY

Blood Draw Options

NavDx® Phlebotomy Services

We offer convenient, accessible blood draw options, including appointments at home or nearby clinics, at no extra cost to the patient:

1. When placing the patient's order, select **Yes** to **Should NavDx arrange mobile or offsite phlebotomy?**
2. Provide a target blood draw date and indicate whether your office provided a test kit to the patient.
3. Once we receive the order, our team will contact the patient directly to schedule their blood draw.

Your Phlebotomy Team

If you would like your clinic/facility's phlebotomy team to perform the blood draw, please note the following:

1. A copy of the **signed Test Requisition Form (TRF) must be submitted with the patient's blood specimen.**
2. **Carefully follow all instructions** included in the test kit.
3. **Adhere to the *Blood Collection Requirements* below** to ensure optimal test performance.

Benefits of NavDx Phlebotomy Services

- Patients assigned by their Providers to both **NavDx Phlebotomy Services** and the **Surveillance Testing Program** have a significantly higher rate of test completion than those who are not.[1]
- Tests can be completed in advance of patients' office visits so you can have their NavDx results in-hand at their appointments.

Blood Collection Requirements

- When using a butterfly needle, **start with a non-additive or EDTA discard tube** before the Streck Tube to eliminate "dead space" in the tubing.
- Gently invert the tube 10 times. **Do not spin down.**
- One 10 mL tube of whole blood is preferred. **Minimum acceptable sample is 8mL whole blood.**
- **Do not freeze or refrigerate.** Ship same or next day at room temperature.

About NavDx®

What Is the NavDx Test?

The NavDx test is the first and most clinically validated liquid biopsy that can detect HPV-driven oropharyngeal squamous cell cancer (OPSCC) and HPV-driven anal squamous cell cancer (ASCC) at the molecular level using a viral biomarker specific to HPV-driven cancer.

With a simple blood draw, NavDx testing enables:

- Detection of recurrence **a median of 4 months earlier** than physical exam or imaging in OPSCC[2] and **a median of 2 months earlier** in ASCC[3]
- Real-time assessment of treatment response
- Confirmatory diagnosis when tissue biopsy is inconclusive or unavailable

Insurance Coverage

NavDx testing is covered by a growing number of commercial insurance companies. Coverage depends on the health insurance company and plan type. NavDx testing is covered by Medicare for surveillance of recurrence in patients with a documented history of HPV+ oropharyngeal or anal squamous cell carcinoma. For more information, visit naveris.com/insurance-billing.
